

Dispatch Tracker (Developer Guide)

Web-based system for real-time QR-based transfer delivery tracking.

Overview

Dispatch Tracker is a centralized web application that enables real-time monitoring and status tracking of transfer delivery (TD) receipts through QR code scanning and manual entry. The system provides guard teams with a single interface to start delivery runs, update delivery outcomes as they happen, and maintain an accurate, up-to-date record of every store’s delivery status.

The system eliminates the need for manual status reporting, reduces the risk of missing or unrecorded deliveries, and ensures that all transfer outcomes — including failed attempts and cancellations — are properly documented with reasons and timestamps.

Target Users

Guard Teams

Problem Solved

- There was previously no system to track whether a transfer delivery was successfully received, failed, or cancelled — outcomes were entirely unrecorded after dispatch.
- IMD and Audit had no way to verify the result of a delivery. There was no official record of which TDs were completed, rejected, or never attempted.
- There was no visibility into how long a transfer took from dispatch to store receipt, making it impossible to assess delivery performance or identify delays.
- The system resolves these issues by recording every delivery outcome — with status, reason, timestamp, and responsible user — giving IMD, Audit, and the promo team a clear, auditable trail from dispatch to final store receipt.

Main Features

Category	Features
Dispatch Management	Start a delivery run by scanning a checklist QR code or entering the checklist ID manually.
	Select which stores to include or skip before confirming a delivery run.

View all active delivery checklists and their real-time progress at a glance.

Search checklists by ID to quickly locate a specific run.

Status Tracking	Mark individual Transfer Documents (TDs) as Out for Delivery, Delivered, Failed, or Cancelled.
	Record a reason when marking a TD as failed.
	Re-attempt failed deliveries without creating a new dispatch record.
	View the full attempt history for each TD including timestamps and responsible user.
Real-Time Monitoring	Live status summary per checklist: out for delivery, partial, delivered, failed, cancelled.
	Store-level aggregate status derived automatically from individual TD statuses.
	Instant UI updates on status changes — no page refresh required.
	Visual indicators highlight checklists that are fully completed (green background).
QR Scanning	Scan printed checklist QR codes using the device camera.
	Automatic QR detection with a framed viewfinder and scan-line animation.
	Manual checklist ID entry as a fallback when a camera is unavailable.
	QR codes are single-use: already-dispatched checklists are rejected with a clear error.

System Architecture

- Frontend: React.js
- Backend: Node.js + NestJS
- Real-Time Communication: Socket.io
- Queue System: BullMQ
- Cache / Messaging: Redis
- Database: Microsoft SQL Server
- Authentication: JWT-based authentication
- Printing Integration: Custom Printer Server

The system uses a client–server architecture with asynchronous job processing for printing operations.

Installation & Setup

Requirements

- Node.js v18+

- Visual Studio Code
- MSSQL Database
- Redis Server

Install Dependencies

Frontend and backend must be installed separately.

```
npm install
```

Environment Variables

Frontend

```
VITE_FRONTEND_URL=https://localhost:5173
```

```
VITE_ENV=development
```

Backend

Server

```
PORT=3000
```

```
NODE_ENV=development
```

MSSQL Database

```
Mssql_DB_SERVER=10.10.42.33
```

```
Mssql_DB_USER=your_username
```

```
Mssql_DB_PASSWORD=your_pass
```

```
Mssql_DB_DATABASE=
```

```
Mssql_DB_PORT=1433
```

Redis

```
REDIS_HOST=192.168.42.52
```

```
REDIS_PASSWORD=W3lc0meRedis2026!
```

Security

```
BCRYPT_ROUNDS=12
```

```
JWT_ACCESS_SECRET=624767096055869195900403461040280741571
```

```
JWT_REFRESH_SECRET=85713100746876451665600600936409954832080
```

```
FRONTEND_URL_LIVE=
```

```
FRONTEND_URL_DEV=http://localhost:5173
```

Run Locally

Frontend:

```
npm run dev
```

Backend:

```
npm run dev
```

Environments

Production Environment

- **VM IP Address:** 192.168.42.52
- **Environment Name:** Docker
- **Purpose:** Live system used by end users

Staging Environment

- **VM IP Address:** 192.168.42.52
- **Environment Name:** Docker
- **Purpose:** Testing environment before production deployment

Repositories

Production Repository

Frontend

- **Repository Name:** McjimReactLive
- **Branch:**
 - main → Production

Backend

- **Repository Name:** McjimNestLive
- **Branch:**
 - main → Production

Staging Repository

Frontend

- **Repository Name:** McjimReactStaging
- **Branch:**
 - main → Staging

Backend

- **Repository Name:** McjimNestStaging
- **Branch:**
 - main → Staging

Deployment Workflow

1. Develop changes locally
2. Push changes to the **Staging Repository**
3. **CI/CD pipeline automatically builds and deploys to Staging Environment**
4. Perform testing and validation in staging
5. Once approved:
 - Push the same changes to the **Production Repository**
 - **CI/CD pipeline automatically builds and deploys to Production Environment**

How to Push Changes

Step 1: Develop and Commit Locally

Make your changes in your local environment, then commit:

```
git add .  
git commit -m "your message"
```

Step 2: Push to Staging Repository

Push your changes to the **staging repository**:

```
git push origin main
```

This will automatically trigger the **CI/CD pipeline** to:

- Build the application
- Deploy to the **Staging Environment**
-

Step 3: Test in Staging

- Verify all features are working correctly
- Perform testing and validation
- Fix issues if needed (repeat Step 1-2)

Step 4: Push to Production Repository

Once staging is approved, push the same changes to the **production repository**:

```
git push origin main
```

This will automatically trigger the **CI/CD pipeline** to:

- Build the application
- Deploy to the **Production Environment**

Notes

- Always push to **staging first before production**
- Ensure both repositories contain the **same code/version**
- Do not skip staging validation before deploying to production

API Documentation

- **Get the store**

Endpoint:

```
GET /api/dispatch-tracker/get-stores
```

Description: Based on the dates selected by the user, it will retrieve all stores with their TD numbers.

Request body:

```
{
  "checklist_id": "40000100"
}
```

Response:

```
[
  {
    "store_code": "RCE",
    "is_dispatch": "Y",
    "td_nums":
    "RCE2026134,RCE2026135,RCE2026136,RCE2026137,RCE2026138,RCE2026139,RCE2026140,RCE
    2026141,RCE2026142,RCE2026143,RCE2026144,RCE2026145,RCE2026146"
  },
  {
    "store_code": "SCE",
    "is_dispatch": "Y",
    "td_nums":
    "TD54260313,TD54260317,TD54260318,TD54260319,TD54260320,TD54260322,TD54260323,TD5
    4260324,TD54260325,TD54260315"
  },
  {
    "store_code": "SCEM",
    "is_dispatch": "Y",
    "td_nums": "TD54260316,TD54260321,TD54260314"
  }
]
```

- **Create Dispatch**

Endpoint:

```
POST /api/dispatch-tracker/create-dispatch
```

Description: Based on the dates selected by the user, it will retrieve all stores with their TD numbers.

Request body:

```
{
  "checklist_id": "40000100",
  "username": "MMALINAO",
}
```

```
"store_codes": [  
  {  
    "store_code": "EC",  
    "is_dispatch": "Y",  
    "td_nums": "EC20260108"  
  },  
  {  
    "store_code": "LMT",  
    "is_dispatch": "Y",  
    "td_nums":  
"LMT2026316,LMT2026317,LMT2026318,LMT2026319,LMT2026320,LMT2026321,LMT2026322"  
  },  
  {  
    "store_code": "LMTM",  
    "is_dispatch": "Y",  
    "td_nums": "LMT2026315"  
  },  
  {  
    "store_code": "RAP",  
    "is_dispatch": "Y",  
    "td_nums":  
"RAP2026252,RAP2026254,RAP2026255,RAP2026256,RAP2026257,RAP2026258"  
  },  
  {  
    "store_code": "RAPM",  
    "is_dispatch": "Y",  
    "td_nums": "RAP2026253"  
  },  
  {  
    "store_code": "RMG",  
    "is_dispatch": "Y",  
    "td_nums": "RMG2026178,RMG2026179,RMG2026180,RMG2026181"  
  },  
  {  
    "store_code": "RP",  
    "is_dispatch": "Y",  
    "td_nums": "RP20260199,RP20260200,RP20260201,RP20260202,RP20260203"  
  },  
  {  
    "store_code": "SLE",  
    "is_dispatch": "Y",  
    "td_nums": "SLE2026196,SLE2026197,SLE2026198,SLE2026199,SLE2026200,SLE2026201"  
  },  
  {  
    "store_code": "SST",  
    "is_dispatch": "Y",
```

```
      "td_nums": "TD46260158,TD46260159"
    }
  ]
}
```

- **Get Dispatch List**

Endpoint:

```
GET /api/dispatch-tracker/get-dispatch-list
```

Description: Based on the dates selected by the user, it will retrieve all stores with their TD numbers.

Request body:

```
{
  "search": "40000100"
}
```

Response:

```
[
  {
    "checklist_id": "40000100",
